

VacuEasylift 4715 VM100 batteries

Project number: 4715
Project supervisor:
Simon Coles, TAWI UK Ltd
Project engineer:
Mikael Kayser, TAWI AB
Used with, this version:
VM100, max 30 kg

A recently installed VM100 used to lift car batteries from one crate to another, the approx weight of about 27 kg. This unit is used in an all day process. Have now gone from just running one line to being able to increase to four lines just because of the efficiency of our unit and reducing the job from a two man job to a single man operation, releasing him to work else where in the plant.
